

The Advisory Starter Set

Three anchor charts and a one-page quickstart. Print them, project them, run them in the next advisory block.

- 2** Three 15-minute openers, one page
The quickstart: what to project, what to ask, what students write.

- 3** The Avoidance Cycle
Signature infographic. Why “just start” fails and where the loop breaks.

- 4** Name the Feeling First
Anchor chart. Four feelings behind procrastination and the counter-move for each.

- 5** The Forgetting Curve
Anchor chart. See it, beat it: review on day 1, 3, 7 and the day before.

- 6** Where these pages come from
The three units, with page counts and prices, if you want the rest.

These pages are yours to print for your own classroom, as many copies as you need. Please do not repost the file. Send colleagues to quirepress.org and they get their own copy by email.

Project one page. Ask one question. Students write one line.

No slides, no prep. Each opener uses one of the charts that follow. Run one per week, or all three in a row.

The Avoidance Cycle

PAGE 3 · PROJECT IT

- 3 min** Project the cycle. Read the five steps aloud. Ask which step is the problem. Most say step 3 ("you avoid it"). Let them.
- 4 min** Reveal the trap: it is step 4. The relief is the bait. Ask students to name, out loud or on paper, the last thing they avoided this week. Keep it light.
- 5 min** Each student writes one task they are avoiding and one step so small it feels silly: "open the doc and type the title."
- 3 min** Set a timer. Everyone does their small step for two minutes, right now. Exit line: "What did I avoid, what did I feel, what did I do?"

Ask: "If it were easy, would you do it?" If yes, the problem is the feeling, not the task.

Name the Feeling First

PAGE 4 · HAND IT OUT

- 2 min** Hand out the chart. Read the key idea: you can't fix what you won't name.
- 5 min** Students pick one task they keep putting off and circle the feeling it gives them: anxious, bored, overwhelmed, or not good enough.
- 5 min** They read the counter-move printed next to their feeling and write one sentence: "Because I feel ___, I will ___."
- 3 min** Pairs swap sentences and say one thing back. Collect nothing; the chart goes in their binder.

Ask: "Which feeling shows up most for you? Does it change by subject?"

The Forgetting Curve

PAGE 5 · PROJECT IT

- 3 min** Project the curve. Ask: "When do you review for a test?" Most say the night before. Show where that lands on the chart.
- 4 min** Trace the sawtooth line: each short review resets the curve higher and makes the next drop slower. Forgetting is normal; spaced review out-runs it.
- 5 min** Students take their next test date and write four review dates in their planner: day 1, day 3, day 7, and the day before.
- 3 min** Exit line: the subject, the test date, and the first review date. That is the whole commitment.

Ask: "What would a 10-minute review look like for this class?" A blank-page brain dump beats re-reading every time.

THE AVOIDANCE CYCLE

see the loop so you can break it.

RELIEF NOW = MORE STRESS LATER.

NAME THE FEELING FIRST

ANXIOUS

“this might go badly” -> start small,
done beats perfect.

BORED

“this is dull” -> make it a game
or a race.

OVERWHELMED

“it’s too big” -> shrink the
first step.

NOT GOOD ENOUGH

“I’ll fail” -> a rough attempt
still counts.

KEY IDEA:
**you can’t fix what
you won’t name.**

NAME IT TO TAME IT.

THE FORGETTING CURVE – SEE IT, BEAT IT

why you review on a schedule.

MY REVIEW DAYS FOR _____:

DAY 1

.....

DAY 3

.....

DAY 7

.....

DAY BEFORE

.....

*forgetting is normal. **spaced review** is how you out-run it.*

Three units, built the same way.

Each one opens with a teacher guide, a standards page and a one-minute quickstart, then the readings, the infographics, the activities and a pinned answer key. Printed pages only, no prep.

Breaking the Avoidance Cycle

A 3–5 day mini-unit on the feeling behind the delay. The cycle infographic (page 3 of this set), a cycle-breaker builder, coping tools, anchor charts, a quiz with key, discussion cards and a family guide.

Grades 6–12 · 34 pages · \$11.95

teacherspayteachers.com/Product/Breaking-the-Avoidance-Cycle-Beat-Procrastination-6-12-17768031

The Procrastination Toolkit

Ten evidence-based tools, one per page, with a four-week plan: the 2-minute start, the smallest possible step, implementation intentions and seven more. Facilitator notes and a parent letter included.

Grades 6–12 · 25 pages · \$10.00

teacherspayteachers.com/Product/The-Procrastination-Toolkit-10-Tools-4-Week-Plan-SEL-Grades-6-12-Health-16286324

Brain-Based Study Skills, High School

How memory works, the illusion of knowing, retrieval practice (three methods), spacing, interleaving, sleep, an exam-week game plan and a 30-day tracker. The forgetting curve is page 5 of this set.

Grades 9–12 · 42 pages · \$11.95
